SUMMARY

Frontend Software Developer with **2+ years of experience** building enterprise Angular applications using **TypeScript, JavaScript, HTML5, CSS3/SCSS, ASP.NET Core, and REST APIs**. Experienced in **responsive UI development, OpenAI/Claude API integration, RAG pipelines, and agentic workflows** for enterprise financial platforms. Strong software engineering fundamentals and problem-solving skills.

TECHNICAL SKILLS

- **Frontend:** Angular, TypeScript, JavaScript, HTML5, CSS3/SCSS, Chart.js, Responsive Cross-browser UI Development
- **Backend:** ASP.NET Core (Web APIs), C#, REST APIs, Node.js/Express.js
- **AI & LLM:** OpenAI API, Claude API, RAG pipelines, Prompt Engineering, Agentic workflows
- **Databases:** SQL Server, Oracle
- **Tools & Practices:** Git, Postman, Docker, OpenShift (Red Hat), CI/CD, Microservices, Microfrontends, Agile/Scrum

WORK EXPERIENCE

- **Software Developer | FinIQ Consulting, Pune** (Jul'24 – Present)
 - Designed, developed, and maintained **Angular-based FX trading modules** including deal entry, configuration, and inquiry screens using TypeScript, SCSS, responsive design, complex validations, and cross-browser compatibility.
 - Delivered an **AI-powered Sales Performance & PnL analytics dashboard** using Angular, ASP.NET Core, OpenAI/Claude APIs, RAG pipelines, and agentic workflows over **10K+ trade records** – reducing manual analysis time significantly.
 - Migrated legacy .NET forms to **Angular-based configuration screens** with SCSS styling, enabling full CRUD operations and improving page load by **~30%**.
 - Developed and enhanced **ASP.NET Core REST API** endpoints supporting **FX deal booking, inquiry, and lifecycle flows** across multiple production modules.
 - Built the **CBSConnectivity service** to fetch customer and trade data from client **Core Banking Systems (CBS)**; developed post-trade processing logic (rollover, closeout, rebook, split) passing results to downstream systems.
 - Leveraged **AI-Assisted Development** (Cursor, Claude Code, GitHub Copilot Enterprise) to accelerate feature delivery and code review cycles across production modules.
- **Engineering Intern | FinIQ Consulting, Pune** (Jan'24 – Jun'24)
 - Built **Angular-based FX deal entry screens** and **MIS dashboards** using Chart.js to visualize trade and performance metrics for internal reporting.

PROJECTS

- **TraceIQ | Angular, ASP.NET Core, Claude API / GitHub Copilot Enterprise** (2026)
 - Built a full-stack AI debugging tool that ingests a JIRA ticket and codebase context, traces root cause across code layers with confidence ranking, and exports a structured audit report as PDF – developed internally at FinIQ and actively used by the engineering team for root cause analysis on production FX bugs.
- **AI Financial Analytics Dashboard | Angular, ASP.NET Core, OpenAI API** (2025-26)
 - Angular dashboard integrating an LLM via RAG pipeline over structured financial data to generate AI-powered observations – demonstrates agentic workflow, prompt engineering, and full-stack integration.
- **Intelligent Housing Recommendation System | Python, NLP, K-Means** (Jul'23 – Dec'23)
 - Personalized housing recommendations using K-Means clustering and NLP sentiment analysis on Google reviews; end-to-end pipeline with map-based visualization using Folium.

POSITION OF RESPONSIBILITY

- **Coordinator | Microsoft Learning Student Club (MLSC), VIT Pune** (2022 – 23)
 - Coordinated technical events and workshops, collaborating with cross-functional student teams.
- **Domain Secretary | EPEC, VIT Pune** (Jul'22 – May'23)
 - Led a team of volunteers and coordinators to execute technical and student engagement initiatives.
